# PROFILE

## Ikram Rice Mills

is a part of an established group of Industries, the "IKRAM Group of Industries" Group was established 1972 and today comprises of several industrial units with a substantial turnover.

### Management

The group is managed by a team of well experienced and dedicated professionals, mainly comprises of the following

**Mr. Yasir Ikram**  
Managing Director

**Mr. Hassan Ikram**  
Director

### Mills

Located in the city of Gujranwala the heart of Punjab, Pakistan, known worldwide for its cultural heritage, traditions and rice harvesting.

### Machinery

The mill is custom designed especially for Processing of extra long rice by Japanese engineers and has a head rice capacity of 5 Matric Tonnes per hour. The mill comprises of Gardens, Rotary Sieves and Color Sorter (Color Master). All these machines are fabricated by SATAKE of Japan, which is internationally renowned for its automatic and the rice remains untouched by the Human hands.

Ikram Rice is an **ISO-9001 : 2015** certified organization and abides by international hygienic standards.

## Message from Chief Executive

The God Almighty has blessed Pakistan with a rich soil and ideal climate to produce the World's finest quality long grain aromatic rice. Some of its varieties are liked very much around the Globe. The demands of the quality rice have increased significantly during the recent years.

Although some other countries also produce rice, but if we maintain and concentrate on our quality and take a special interest in the export strategies, we can become the leading exporters of rice all over the world.

In view of the foregoing, we at **IKRAM RICE Mill's** have diverted all of our endeavors to multiply our exports of rice with a strong commitment on quality.

## Product Range

We have achieved a prominent position in the international arena by exporting the finest varieties of both Basmati and Non-Basmati Rice. We are dealing in the following varieties of rice.

### PAKISTANI SUPER KERNEL BASMATI RICE

(White / Cargo or Brown / Parboiled Rice)

### PAKISTANI BASMATI RICE PK-386

(White & Steam)

### PAKISTANI LONG GRAIN RICE (IRRI-9 & IRRI-6)

(White & Steam)

### PAKISTANI 1121 KAINAT STEAM RICE

Extra Long Grain Rice (White & Steam)

## Premium Basmati Rice

Packing is one of our salient features. We pack our branded rice under the name of **IKRAM RICE** in environmental friendly. Biodegradable packing of Cotton, Jute, Paper, Poly and Card Board in Packaged size of 1,2,5,10,45 & 90 Kgs to meet different kinds of marketing demands.

We also pack the products under any brand name on the demand and choice of our valued buyers.

## Quality Control System

We are committed to supply a uniform Quality to all our Valued Customers and our main emphasis is on quality control, which we achieve in the following three ways.

### Through Procurement

We select the best farmers in the finest rice growing areas of Punjab and our staff constantly monitors their paddy fields from sowing to harvesting and also advise these farmers on the correct application of Fertilizers and Pesticides to Produce healthy grains of rice without chemical residue. Hundreds of samples drawn from the fields after harvesting and husking are examined in our Laboratory for final selection of stocks, which are stored after procurement for aging till rice attains maturity.

All the stocks are numbered and a track record is maintained even after processing and export.

### Through Laboratory Tests

Samples are drawn during different states of processing an milling on regular intervals of one hour and are tested in the laboratory to constantly monitor the uniformity in whiteness degree, moisture contents, average grain length (AGL), broken percentage and color.

These different reports are fed to the computer and can be provided to the customers on demand.

## Warehouses / Godown Capacity

We have within the mill's premises warehousing facility to store a sufficient quality of rice. The warehouses are built by us according to the World Bank Food Program requirements to ensure the ageing of rice under controlled conditions. We ensure complete elimination of weevil and insects in our Mill's premises by regular fumigation process. From time to time, we maintain the large inventory of quality rice in our warehouses.

## Through Grading and Color Sorting

Grading system consists of six graders and four stage rotary sieves installed in different stages of milling and processing. This enables us to ensure uniformity in grain height and also controls the broken percentage according to the specific requirements of our valued Customers.

For obtaining uniformity in grain color, we have installed Color Sorter of 120 Channels form Satake of Japan, a fully computerized State of Art machine considered to be the top of line Color sorters in the world.
